

LETTING THE LIGHT IN

DeepBlue Energy

UNIQUE LIGHTING

At DeepBlue Energy we create unique, sustainable lighting concepts; solutions that interplay effectively with the space structure, its function and its surroundings. We explore the use of daylight, of bioclimatic integration, and of tuning tones to improve wellbeing.

" There is a crack in everything.
That's how the light gets in."

Leonard Cohen, Anthem

LIGHT DESIGN

At DeepBlue we use LED, fiber optics and new luminescent and light integrating materials to explore a new horizon of possibilities for incorporating lighting in architecture, and in interior and urban design; for controlling shapes, colors, patterns, tones and intensities; for creating advanced lighting systems that use a minimum of energy and make sense economically and environmentally.

LOUIS VUITTON

PROJECT EXECUTION

The DeepBlue team works closely with clients and interdisciplinary project teams to develop and install lighting systems, advise in the selection of lighting materials, and provide customized lighting fixtures.

DeepBlue is also a pioneer in the development and installation of the most advanced management and control systems which offer our clients full control over the whole spectrum of lighting performance, ranging from light tone, pattern and distribution, to light intensity and power consumption.

PRODUCT DEVELOPMENT

At DeepBlue we develop customized light sources and light fixtures to fit within the lighting or architectural requirements of our clients. These developments may range from specific projects with lamp and equipment designers, to custom made light fixtures to retrofit in retail stores' displays.

CONSULTANCY

DeepBlue provides consultancy in all aspects of building sustainability. These include energy use, lighting and bioclimatic integration.

Photo: Installations of the European Space Agency, for whom DeepBlue has worked as an external advisor for sustainability related matters.

OUR CLIENTS

We have built an international portfolio of clients, from a broad base of market sectors that include hospitality, high end retail, health and wellbeing, museums and art galleries, and industry.

Our projects range from developing lighting concepts and control systems to illuminate antique objects at the Portuguese National Library, to developing products and managing the lighting upgrade of a retail chain with more than 100 stores; to leading a pilot implementation in a sensitive and hazardous industrial setting.

The unifying element is the use of light and the development of lighting solutions that define and elevate these spaces in the most sustainable matter.
